The Challenge

Cyberint needed to bring all financial operations in-house as all financial functions were managed externally, including bookkeeping, payroll, and accounting.

The Result

Cyberint gained the ability to easily generate financial reports and rapidly analyze data with specific pre-defined criteria.

Cyberint About Cyberint

Cyberint is a cybersecurity solution provider that pioneered attack surface reconnaissance. The solution fuses threat intelligence with attack surface management, providing organizations with extensive integrated visibility into their external risk exposure. Leveraging autonomous discovery of all external-facing assets, coupled with open, deep & dark web intelligence, it allows cybersecurity teams to uncover their most relevant known and unknown digital risks - earlier. Global customers, including Fortune 500 leaders across all major market verticals, rely on Cyberint to prevent, detect, investigate, and remediate phishing, fraud, ransomware, brand abuse, data leaks, external vulnerabilities and more, ensuring continuous external protection from cyber threats.

The Challenge

Before implementing Priority, Cyberint managed all financial functions externally. As Cyberint faced extensive growth, it was decided to bring all financial operations in-house, including bookkeeping, payroll, and accounting.

The Solution

Priority was initially chosen and implemented as it provided the highest ROI among the assessed solutions. As part of Cyberint's organizational changes over the years, priority's ERP system was restructured to better accommodate new financial processes and streamline financial operations.

Tomer Lebel, Controller at Cyberint, managed the new system setup project that included renewed characterization and attribution of accounts, the definition of new bookkeeping procedures, and setting up new subsidiaries' data consolidation processes.

Lebel shares, "In the past, I used different solutions from leading ERP providers, but Priority is much easier and simpler to understand and operate."

The Result

- ▶ Today, after a rapid onboarding process that included accelerated learning and training, Cyberint uses Priority to streamline and simplify the payroll processes, bookkeeping workflows, and accounting records and ensure accurate audit trails.
- ▶ Cyberint regularly customizes the system independently without needing implementers and IT services.
- ▶ Cyberint gained the ability to easily generate financial reports and rapidly analyze data with specific pre-defined criteria.

"In the past, I used different solutions from leading ERP providers, but Priority is much easier and simpler to understand and operate."
