About Dejavoo

Dejavoo is a multinational fintech company specializing in innovative payment solutions. With subsidiaries in the United States, Canada, and Israel, IPOS Dejavoo offers a comprehensive suite of products, including payment terminals, gateway services, and software solutions.

The Challenge

As Dejavoo expanded internationally, it became very challenging to manage diverse financial operations across multiple countries, each with its own currency and language. Consolidating financial data from various subsidiaries was time-consuming and prone to errors, hindering timely decision-making and strategic planning.

The Solution

To address these challenges, Dejavoo implemented Priority ERP, a robust enterprise resource planning system. Priority ERP's multi-currency and multi-language support allowed each regional team to operate in their native language and local currency, while enabling the headquarters to consolidate all financial data seamlessly into English and U.S. dollars. This integration streamlined operations and provided real-time financial insights across all subsidiaries.

The Result

The adoption of Priority ERP transformed Dejavoo's financial management:

- ▶ **Efficient consolidation:** One-click generation of consolidated financial reports across all global entities.
- ▶ **Real-time insights:** Immediate access to accurate financial data, facilitating informed decision-making.
- ▶ **Localized operations with central oversight:** Regional teams operate in their local languages and currencies, while the headquarters maintains centralized control and oversight.
- ▶ **Scalable growth:** Because Priority helped them become so much more efficient, IPOs was able to manage its international expansion without having to increase headcount.
- ▶ **Time savings:** Automated processes reduced manual workloads, allowing the finance team to focus on strategic initiatives.

“Priority has given us a large portion of our lives back. It’s so efficient — it allowed us to grow without changing our headcount. One click, and I’ve got my answer.”

Enrique Menocal, CFO, Dejavoo
